

**EUROSATORY 2026:
A DYNAMIC POINT OF REFERENCE AND SUCCESS FOR EODH**

EUROSATORY 2026 proved to be an exceptionally successful milestone for the Greek company EODH, rewarding its 25-year creative course in the field of protection and upgrade of armored vehicles, and establishing EODH, from now on, as a manufacturer of land platforms for the Franco-German group KNDS.

“The Minister of Defense of the Republic of Cyprus Vasileios Palmas at EODH’s Booth”

EODH booth attracted the interest of visitors from numerous countries (USA, Canada, Spain, Switzerland, Austria, Germany, Italy, France, etc.), who proceed to study the exhibits and ask targeted questions to EODH's specialized Teams, ultimately generating the exchange of views that constitutes a critical and necessary prerequisite for the development of partnerships proposed to and under consideration by EODH.

Interest was generated by the ASPIS land-platform protection system, which is in the final stage of industrialization and integration following the agreement between EODH and KNDS at EUROSATORY 2024.

The proposal for the integration and interoperability of Unmanned Ground Vehicles (UGVs) and Tethered UAVs on the LEO 1A5 tank, also made a strong impression, receiving front-page coverage in the EUROSATORY 2026 Daily edition (Day 4), just as the ASPIS System had been featured on the front page in 2024.

Major international and Greek Original Equipment Manufacturers (OEMs) visited the booth and expressed strong interest in future collaborations with EODH in areas of mutual interest.

During the exhibition, a New Contract was signed between EODH and KNDS within the framework of their long-standing strategic cooperation agreement, with the primary objective, in the first phase, being the participation in the manufacturing of BOXER, 8x8, land platforms family. This Executive Agreement marks the beginning of a new 10-year cooperation between EODH and a leading European manufacturer, within the range of 200 million euros.

EODH demonstrates in praxis, its dynamic progress and export oriented approach, thus continuously and positively serving European Defense Ecosystem.
